

Under "Protect the Planet", one of the three main pillars of our sustainability strategy "Care for Next", Şişecam declares and undertakes the following, in line with the corporate goals of the Şişecam Group:

- to comply with the laws, regulations, legal announcements, and notifications of the countries in which we operate, to follow national and international developments and policies, to review their impact on energy policy, and to propose, plan, and carry out related activities in line with our Group's strategies under the sustainability, energy efficiency, environment, and climate management,
- to create strategies and action plans regarding energy efficiency, to design industrial automation, Industry 4.0, and digital transformation projects in electrical, mechanical, and thermal systems, as well as renewable and conventional energy generation (electricity, steam, water, etc.) facility projects from installation to operation, along with their regulatory impact analyses, to monitor, evaluate, and compare their implementation, and plan remedial measures,
- to take into account energy-efficient and environmentally friendly services and technologies when creating all processes from the design stage,
- to achieve continuous and uninterrupted optimum conditions by providing high efficiency with minimum energy source and minimum emissions in combustion processes,
- to carry out the implementation, coordination, and monitoring activities of the Energy Efficiency Action Plan in Industrial Facilities and Systems, to follow and provide support for energy efficiency studies, incentives, and related legal processes,
- to determine end-to-end energy-saving potentials throughout the Group, to conduct energy studies or to have them conducted, to carry out necessary studies including those relating to alternative fuels, to monitor, participate in, implement, inspect, and realize energy efficiency research and development projects,
- to create the energy efficiency inventory, keep it up to date, and establish and operate the Energy Efficiency Management and Monitoring System to support planning, projection, monitoring, and evaluation efforts,
- to prioritize energy efficiency and renewable energy use in future products or processes, planned investments and activities,
- to review periodically our goals and objectives and to create the necessary resources to achieve them,
- to create and encourage the energy culture and energy efficiency awareness throughout the Group, to follow the policies and strategies related to energy efficiency and environment-energy, and to manage or coordinate their realization,
- to ensure that our policy is understood and adopted by our employees and all our stakeholders, to create and increase our stakeholders' awareness of responsibility on issues related to the consumption and efficient use of energy.
